

Ai Resume Builder

Name : Pruthvik N

Registration Number : P18GH25S126041

Department : MCA

College : Seshadripuram College, Bangalore

Academic Year : 2026–2027

Project Overview

The AI Resume Builder is a web-based application developed to simplify the process of creating professional resumes. It enables users to enter their personal information, educational qualifications, work experience, technical skills, projects, certifications, languages, and hobbies through an easy-to-use interface. As users enter their details, the resume is generated instantly with a live preview. The application provides a modern and responsive user interface suitable for desktop and mobile devices. It also supports uploading a profile photograph and downloading the completed resume as a high-quality PDF. The project demonstrates how Artificial Intelligence can assist in designing user-friendly applications and accelerate software development by generating code, improving UI design, and suggesting efficient solutions.

AI Tool(s) Used

Primary AI Tool Used: ChatGPT

Prompt Used

Build a simple, modern, and responsive Resume Builder web application with a clean and professional user interface. The application should contain two sections: a resume input form on the left and a live resume preview on the right. Include the following features: • Full Name • Professional Title • Profile Photo Upload • Email • Phone Number • Address • LinkedIn • GitHub • Career Objective • Education • Work Experience • Skills • Projects • Certifications • Languages • Hobbies The application should support: • Live Preview • Add Multiple Education Entries • Add Multiple Experience Entries • Add Multiple Skills • Profile Photo Upload • Download Resume as PDF • Print Resume • Responsive Design • Professional Resume Template • Attractive UI • React + Tailwind CSS • Clean, reusable, and well-commented code.

Results

6. Learning Reflection

Learned how AI tools significantly reduce software development time.

Improved prompt engineering skills by writing detailed prompts.

Learned to build a responsive Resume Builder using modern web technologies.

Understood the importance of user interface design and user experience.

ChatGPT was the most useful AI tool because it helped generate code, solve programming errors, improve the UI, and provide project documentation.

Conclusion

The AI Resume Builder project successfully demonstrates how Artificial Intelligence can assist developers in building professional web applications efficiently. By using ChatGPT and Visual Studio Code AI Chat, the development process became faster, more organized, and more productive. The application provides users with a simple and effective way to create professional resumes with live preview and PDF download functionality.

AI Tool | Purpose

ChatGPT | Generated project ideas, source code, prompts, debugging support, and documentation.

Visual Studio Code AI Chat | Generated code suggestions, debugging assistance, and development support inside Visual Studio Code.

Visual Studio Code | Primary IDE used to build, test, and run the Resume Builder project.
